SOME RESULTS ON UNIFORM STATISTICAL CLUSTER POINTS

We present some results linking the uniform statistical limit superior and inferior, almost convergence and uniform statistical convergence of a sequence. Also, we study the relationship between the set of uniform statistical cluster points of a given sequence and its subsequences. The results concerning uniform statistical convergence and uniform statistical cluster points presented here are also closely related to earlier results regarding statistical convergence and statistical cluster points of a sequence. This is joint work with Dr. Tu ğba Yurdakadim.
